

SUMMARY

A Software Engineer with **5+ years** of experience in **mobile application** and **full-stack** development, and I was a **Co-Founder** of **Plexus Transport Services**, where I built real-time GPS fleet management solutions. I enjoy working on AI-driven applications and focusing on secure **software development**, emphasizing **CI/CD pipelines** and **Agile** methodology to create scalable systems. Currently, I am pursuing an **MS in Computer Science** at **New Jersey Institute of Technology**.

EDUCATION

New Jersey Institute of Technology

MS in Computer Science

Newark, USA

Expected May 2026

Coursework: Data Structures & Algorithms, ML, Internet & Higher Layer Protocols, AI, Software Architecture, Data Management & System Design

Jawaharlal Nehru Technological University Hyderabad

B.Tech in Computer Science & Engineering

Hyderabad, India

June 2015 - May 2019

SKILLS

Languages: Java, Dart, Python, Javascript, JavaScript, Kotlin, Swift, TypeScript, SQL

Frontend: Flutter, React Native, React.js, Android (Development), iOS (Development), Ionic

Backend: Node.js, Express.js, Django, FastAPI, Streamlit

Databases: MySQL, PostgreSQL, MongoDB, Redis, SQLite, Oracle

DevOps & Cloud: AWS, GCP, Firebase, CI/CD (GitHub Actions), Docker, Jenkins, Bitbucket

EXPERIENCE

Director/Co-Founder - Plexus Transport Services Pvt. Ltd.

March 2016 - August 2024

- Led technical development, sales, and HR functions for a GPS fleet management solutions startup.
- Increased customer satisfaction by 40% through the optimization of technical support processes.
- Developed the "Pleasehorn" mobile application (Android & iOS) with real-time GPS tracking.
- Optimized GPS data processing using Firebase, reducing latency by 20% for a fleet of over 1,000 vehicles.

Software Engineer - C and S Technologies Pvt. Ltd.

February 2024 - August 2024

- Created a Flutter app for clothing customization that uses the camera to capture facial and body images, processes them with Firebase ML Kit/TensorFlow Lite for measurements, and offers personalized garment recommendations.
- Integrated Firebase Firestore for user data storage and PayPal APIs for payments, enabling users to save preferences and order custom-fitted outfits seamlessly.

Mobile Developer - Turing Enterprises, Inc.

August 2023 - December 2023

- Developed a Flutter application integrating CometChat for real-time messaging and OAuth2 authentication via Google, Meta, and Apple sign-in, boosting streamlined onboarding.
- Engineered a fault-tolerant distributed payment system using Stripe's API, achieving a 100% success rate in load tests simulating 100+ concurrent transactions, ensuring zero downtime during peak traffic.
- Implemented an NLP-powered sentiment analysis pipeline (BERT) to automate customer feedback processing, increasing response rates by 50% through prioritized issue triaging.

Software Development Engineer-II - NonStop io Technologies Pvt. Ltd.

March 2022 - October 2022

- Developed a React Native application with a hybrid geolocation strategy integrating GPS and geofencing APIs, achieving 90% location accuracy and contributing to a 25% increase in Net Promoter Score (NPS).
- Architected a layered security model utilizing Flutter Secure Storage for AES-256 encryption of sensitive local data and Firebase Analytics for granular user interaction tracking and security monitoring.
- Enhanced application performance by 30% through dynamic code splitting and lazy loading, guided by real-time performance metrics collected with Firebase Analytics.
- Automated deployment pipelines with GitHub Actions, employing Docker containerization, parallelized unit/integration testing, resulting in a 30% reduction in deployment cycles and a 15% improvement in SonarQube quality gate pass rate.

Flutter Developer - Around29 Digital Media Solutions

March 2021 - March 2022

- Engineered high-performance Flutter and React Native applications using Google Maps APIs, Firebase backend services (Firestore and serverless Cloud Functions), and Razorpay payments. Enhanced front-end performance by 25% (FCP) through lazy loading, code splitting, and asynchronous data fetching.
- Ensured comprehensive quality assurance by achieving and sustaining 100% test coverage (Jest) for critical application modules, leading to a 70% decrease in production defects and instability reported via Crashlytics.
